

$$P = \frac{1}{\Delta} \sum_{k=1}^n p_k \Delta_k$$

$$\Delta = 1 - \sum_a L_a + \sum_{bc} L_b L_c - \sum_{def} L_d L_e L_f + \cdots$$

p_k : forward-path gain

L_a : loop gain

Δ_k : cofactor of the k th forward path
