

item	example 4
open-loop model	$G(s) = K^*(s + 1)/[s(s - 1)(s^2 + 4s + 16)]$, with $K = K^*/16$
imaginary-axis crossings	$\omega_1 = 1.46$, $K_1^* = 19.7$ and $\omega_2 = 2.56$, $K_2^* = 35.7$
design conclusion	the stable window is $19.7 < K^* < 35.7$, equivalently $1.234 < K < 2.23$
