

item	case result
characteristic equation	$D(s) = 1 + \frac{0.01715K}{s(s+0.1)(s+2.14375)} = 0$
root-locus form	$G(s) = \frac{0.01715K}{s(s+0.1)(s+2.14375)}$
open-loop poles	0, -0.1, and -2.14375
reading rule	one branch moves left, while the other two form a complex pair near the origin where damping-ratio selection is performed
