

use e_{ss}^*
to determine K

confirm ω_{c0} is excessive
but γ_0 is insufficient

pick new ω_c so that
 $\gamma_0(\omega_c) = \gamma^* + 5^\circ$

verify the new ω_c and γ

read the attenuation needed at ω_c
and compute b

place $\omega_z \approx 0.1\omega_c$
then $\omega_p = b\omega_z$
